

# DSD601AD Instruction Manual

## Specifications

Power Supply Input : 85VAC~275VAC 50/60Hz  
Temperature Sensor Display Range: -49°F~239°F  
Temperature Setting Range: -30°F~220°F  
Temperature Accuracy:  $\pm 0.5^{\circ}\text{F}$   
Load Current: <30A  
Overall Dimension: 125x83.5x30.5mm

## Features

### 1. Temperature Setting

The temperature range displayed: -49°F~239°F, and the setting range is -30°F~220°F. Factory set at 68°F adjust the temperature by pressing button "▲" or "▼" 0.5°F each time.

### 2. Differential Setting

The differential setting range:  $\pm 0.5^{\circ}\text{F}$ ~ $\pm 15^{\circ}\text{F}$ . Factory set at 1°F, hold the power button for 3 seconds and adjust by pressing button "▲" or "▼", 1°F steps.

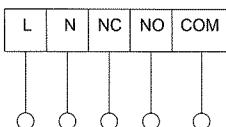

### 3. Settings Protection

Settings will be saved when powered off, and recovered when powered back on.

### 4. Fault Indication

In the case of a malfunction, the screen will display E0 and the output will be shut down. The fault should be eliminated after the thermostat is turned off and on again.

## Wiring Diagram

## Buttons Setting

Three buttons in total : "▲" "▼" "⊕"

1 "▲": Increase parameter (Temp or Diff)

2 "▼": Decrease parameter (Temp or Diff)

3 "⊕": Power on and off of the thermostat by quick pressing. (Sets differential Temp when held for 3 seconds with power off.)

## Temperature Setting and Adjusting

Set the temperature by pressing "▲" "▼" when the thermostat is on, temperature set point will be displayed on the screen. The thermostat will display the current sensor temperature after 3 seconds of no buttons being pressed

## Differential Setting

With the power off, press and hold "⊕" button for 3 seconds, the current differential will be displayed. User can adjust the required differential by pressing "▲" "▼", differential setting will be saved after 3 seconds of no buttons being pressed.
